

Systemtech *IPG/7000 Series* Dial- to-IP Converters

For Electronic Payments and More In Grocery Applications

Introducing the perfect combination of cost savings, protection of investment, and revenue enhancement for IP-based payment transactions.

Systemtech dial-to-IP converters permit POS payment terminals, POS payment controllers, check readers and ATMs to simply and efficiently re-route transactions via the Internet or private IP networks instead of dial up telephone lines.

Monthly recurring costs for phone lines may be eliminated in favor of a single, high-speed Internet or private IP connection. Costs per transaction may be lowered. Previous investments in credit and debit terminals may be maintained. Transaction times may be dramatically reduced, eliminating costly peak period delays, and increasing revenue.

And Systemtech converters can further enhance your business by enabling new gift and loyalty programs without the need for new equipment or phone lines.

Systemtech gateways are the clear choice of leading payment processors, broadband suppliers, and grocery POS integrators everywhere. So contact your favorite supplier today, and accelerate your company's transition to IP-based savings!

Systemtech Dial-to-IP converters simultaneously support diverse credit, debit, check, loyalty, and ATM applications over a single broadband connection.
